sexes. . . . acquire the procreative state on the second
day after the *trichinae* meat has been taken into
the stomach. . . . About the sixth day the minute
star-like embryos imbedded within the orbits of
the female are encased. . . . They forthwith penetrate
the mucous coat or walls of the intestine, enter
the capillaries, are transported by the circulation to
the whole muscular system, pierce and escape from
the capillaries to penetrate that tissue, and within a
fortnight attain the ordinary characters of *Trichina*
spirals. . . . As the first introduction of *Trichina*
is from eating meat, the animal matter in the sausage
or other commonly given to pigs, occasion the
agency of their occurrence in that domestic animal.
Where the custom may prevail of eating pork, e.g.
ham, bacon, sausage, &c., imperfectly cooked or
raw, the *Trichina* in such meat are introduced in
a state highly favourable for their development and
procreation into the intestine, and thus is produced
the painful and often fatal disease called *Trichiniasis*.
. . . . Wholehog feeding of the pig with vegeta-

the main preventives of *Trichiniasis*.—*Quoss, in
Brande and Cox, Dictionary of Science, Literature,*

Trilateral. adj. [Lat. *latus*, *lateris* = side.] Having three sides.

Trilateral. adj. [Lat. *litera* = letter.] Consisting of three letters. This name is *trilateral*: it consists of three letters, then, *latus*, and *latus*; all which are here symbolical.—*Bibliotheca Biblica*, i. 237.

The Semitic language is a remarkable exception to this observation, the words being derived in all the known dialects from *trilateral* or dissyllabic roots, a property which seems to be so deeply imbedded in the structure of all these idioms, that it has been generally considered as belonging essentially to the very groundwork of the language. *Pritchard, Researches into the Physical History of Mankind*, ch. xix. § 2.

Incisions of legs and feet have been supposed to be traceable in some specimens, but they have not yet been satisfactorily made out. On the other hand, this deficiency is partly made up by the perfection of the organ of sight, which is very complete; and the animal seemed to have been provided with the means of defending itself, being enabled to roll itself into a ball, like some of the smaller living crustaceans, and the common woodlouse. *Aschli, Geology, Introductory, Descriptive, and Practical*.

Trilogy. s. [Gr. *trilogia*.] Dramatic representation in three parts. See also *Tetralogy*.

therein without repentance.—*Perkins.*

All the nations of Europe seem to love the trochaic
verse; it was frequent in the Greek and Roman
stage; it is more common than any other in the
popular poetry of modern languages. This verse

from its simplicity, its liveliness, and its ready accommodation to dancing and music. In St. Austin's poem, he united to a *trochaic* measure the novel attraction of rhyme.—*Hollan, View of the State of Europe during the Middle Ages*, pt. I. ch. 12.
These verses are regular, accentual, *trochaic*—*Ibid.* note.

These *trolls* are superior to man in strength and stature, but far beneath him in mind. In short, they are always untutted, just as the Greek Titans are overcome by Zeus when aided by Prometheus, the fire-bringer. The *trolls* thus embody the idea of unintellectual brute force, or more awkward strength; it must, however, be remembered that the *trolls* are not the only beings who, formidable

The race [in New Zealand] was the same as that of the *tropical* islands; but, from having to struggle with a climate less soft, the people were more energetic and manly, the foremost, indeed, of all extra-European savages. Worse than the anarchy at sea,
Where fishes on each other prey;
Where every *trout* can make as high rant
Over his inferiors as our tyrants.

The grey *trout* is distinguished from the Salmon
by several specific peculiarities. The salmon
differs decidedly in form. . . . The salmon *trout* is
of the migrating species in this country, the next in
value to the salmon. . . . The common *trout* . . . is an
inhabitant of most of the rivers and lakes of Great
Britain. . . . The Great Lake *trout* of Loch Awe . . .
was shortly noticed by Pennant . . . as a native
of Ulster Lake in Cumberland, and of Lough
Neagh in Ireland. . . . Dr. Richardson describes
the Lochleven *trout* as distinct from the Salmon
fugus, and has pointed out some of the differences between
them. — Farvell, *History of British Fishes*.

the belly. — Shaw, *Specimen of Man*, ch. viii. § 1.

Leave off your tickling of young helms like *trouts*.

Trouvère, or Trouveur. *s.* [Etymologically,
trouvere and *troubadour* are the same words,
both being derivatives from the verb *trou-*
ver — find; and, as such, meaning inventors,
makers, poets. The difference, then, lies
in the dialect to which the two forms be-
long, *trouvère* being a northern, *troubadour*
a southern, French substantive. The first
belongs to the Langue d'Oïl; the second
to the Langue d'Oc. The first is Romance,
or Norman; the second Provençal. As
the origins, so the significations differ.
The *trouvères* composed narrative rather
than lyric poetry; the *troubadours*, lyric
rather than narrative. Of the two, *trou-*
badour makes the nearest approach to an
English word.] See extracts; also under
Troubadour.

Without entering upon the controverted question
as to the origin of romantic fiction, . . . it is un-
doubtedly the fact that the actual stories upon which early
and numerous class of romances were founded are
related to the traditions of the last people. These
are such as turn upon the fable of Arthur. . . . An
equally imaginary history of Charlemagne gave rise
to a new family of romances. The authors of these
fictions were called *trouvères*, a name obviously
identical with that of troubadours. But, except in
name, there was no resemblance between the mini-
sters of the northern and southern dialects. The
invention of one class was turned to description,
that of the other to sentiment; the first were epic
in their form and style, the latter almost always
lyric. We cannot perhaps give a better notion of
their dissimilitude, than by saying that our scho-
lar Chaucer, and the other Northern *trou-*
bador, *View of the State of Europe during the Middle*
Ages, pt. ii, ch. ix.

The younger poetry of Italy . . . had not yet, with
all its real superiority, either supplanted the old
lays and romances of the *trouvères* and *trou-*
badors, or even taken its place by their side. — Craik,
History of English Literature, vol. i, p. 278.

Truelove. s.

1. Sweetheart. Should my *truelove* less than woman be, She were scarce anything. *Donne, Poems*, p. 62.

There is another word of this sort which requires notice: i.e. *true-love*. Adjective for adjective, *true* is as likely to precede the substantive *love*, as 'faithful,' 'charming,' &c., or any other word. Moore might as easily have written—

Then fare thee well, mine own *true love*— as

Then fare thee well, mine own *dear love*, though he did not. *True Love*, then, like 'black bird,' is a pair of words. But *true-love* (as in *truelove's* knot) is a compound. Of what? Perhaps of *love* preceded by *true*; in which case it is a word like 'blackbird.' Perhaps of something else. In Danish, *truelove*—to betroth, and *truelove*—a betrothed or engaged person. . . . Upon this Mr. Laing, in his well-known work upon Norway, remarks that the words have no origin in the affections, and that 'a man may be a *true lover* to his bond of iron pounds, as well as to his sweetheart.' He goes further, and holds that the word *love* itself—'amo,' has the same loyal character: in which, however, he is wrong—as may be seen from the German 'liebe,' and the Latin 'lubet.' Laying this, however, out of the question, it is clear that, if the first part of this doctrine be right, we have, in *truelove*, not only a curious derivative, but a word of Scandinavian origin. And such I once believed it to be.—*Dr. E. G. Latham, English Language*.

2. In *Botany*. Native plant of the genus *Paris* (quadrifolia); oneberry.

One-berry, or herbe *truelove*, at the very top whereof cometh forth four leaves, directly set one against another, in manner of a Burgundian cross, or a true-love knot; for which cause among the ancients it hath been called herbe *truelove*.—*Gerard, Herbal*, p. 328: 1597.

Trueloveknot, or Trueloversknot. s. Lines drawn through each other with many involutions, considered as the emblem of interwoven affection. I'll carve your name on barks of trees With *trueloveknots* and boughs, That shall infuse eternal spring. *Butler, Hudibras*, l. 1, 565.

Say'st thou so? art thou there, *trumpenny*?
Come on. *Shakespeare, Hamlet, i. 2.*

Truffe. s. [Fr. *truffe, truffe.*] Subterranean edible mushroom.

In Italy, the usual method for the finding of *truffles*, or subterranean mushrooms, called by the Italians *tartufi*, and in Latin *tubera terrea*, is by tying a cord to the hind leg of a pig, and driving him, observing where he begins to root.—*Ran.*

As *truffles* spread over a large space, it is difficult to say by what means they progress. The *truffle* is one of the most wholesome and nutritive of the esculent fungi, and is generally discovered by means of dogs, which are taught to scent it; so that on smelling the *truffle* they bark and scratch it up. *Truffles*... are served up, either roasted in a fresh state like potatoes, or they are dried, shred, and dressed as ingredients in soups and ragouts.—*Lindley, Vegetable Kingdom.*

Truism. s. Self-evident and undeniable truth.

Truism occurs in Swift's Remarks on the Rights of the Christian Church, and in Bishop Berkeley's *Alciphron*.—*Pegge, Anecdotes of the English Language, p. 37; 2nd ed.*

2. In Medicine. The older and more general use of this word was less restricted than at present. With the exception of a class of skin diseases, where the tubercle is generally more or less hard and resisting,

the term now applies almost exclusively to the characteristic deposit of Scrofula, and especially to that form which, having the lungs as its seat, is known as Phthisis, Pulmonary Phthisis, or Consumption. *Tuberculosis* is a rarer, and more especially technical, derivative; the commoner being *tuberculous*, used most correctly in reference to the parts which are affected by tubercles, and *tubercular* in reference to the disease.

Deposits [are present] in various organs or parts, of small masses, varying in size, consisting of a friable, insidious substance, resembling cheese, and denominated *tubercle*.—Copland, *Dictionary of Practical Medicine*.

These *tubercles* are masses of unorganised matter, also resembling curd or new cheese, more or less, but of various shapes and sizes. They suffer gradual changes; soften or break down; undergo a sort of suppuration; and the softer matter into which they thus, as it were, melt, has the characters that distinguish the pus of a scrofulous ulcer or abscess.—Sir T. Watson, *Lectures on the Principles and Practice of Physic*, lct. xii.

In 1819, Leconte . . . first showed that growth to which the name of *tubercle* was applied, formed almost the sole cause of consumption, and consequently he restricted the term phthisis to the disease produced by *tubercle* in the lungs.—Dr. W. Aitken, *Science and Practice of Medicine*, p. 189: 1868.

Tubercle may be regarded as an exudation possessing deficient vitality, sometimes grey, but more frequently of a yellowish colour, varying in size, form, and consistency, essentially composed of molecules, and irregularly formed nuclei.—Dr. J. H. Bennett, *Clinical Lectures on the Principles and Practice of Medicine*, p. 179: 1868.

Tuesday. *s.* [A.S. *Tiwensdag*.] Name for the third day of the week. The exact form of the denomination of the old heathen deity in the nominative case is only to be got at by inference. In the Old Norse we have both the forms *Tysdag* = Tuesday,

Dies Martis, as the name of a day of the week, and *Tyr* as the name of a god in the

Edda and Heimskringla. Of *Tyr* the genitive case would be *Tys*. The Old High

German for Tuesday is *Ziestac*. Putting

all this together, Grimm gets as a result

Tiv as the Anglo-Saxon, as *Zie* is the Old

German nominative. In the Masso-Gothic

we find neither the name of the god nor

of the day of the week; analogy, however, gives us:—nominative, *Tius*; genitive, *Tivis*; dative, *Tiwa*; accusative, *Tiu*; vocative, *Tiu*, which brings the word, with its inflections, in direct connection with the Sanskrit, *Djaua*, *diaus*, *diwé*, *diteum*, *djaus*; the Greek, *Zeús*, *Zeús*, *Zeús*, *Zeús*; and the Latin *Ju-(piter)*, *Jovis*, *Jovi*, *Jovem*, *Ju(piter)*; these leading us to *Deus* and *Diós* = God.

In the Edda, *Odin* is the supreme god, but there is evidence that before his pre-eminence was established, *Tyr* was worshipped as the principal deity of the Germans, being etymologically the same as the Greek *Zeus*. The name survives in the Anglo-Saxon *Tiwedag*, *Tuesday*; in the names of places, as *Tewesley*, *Tewling*; and of flowers, as in the Old Norse *Tyðula*, *Tyðvid*. According to Tacitus, the Germans spoke of themselves as sprung from *Tiwes*, and his son *Mannus*.—Cox, in *Brande and Cox, Dictionary of Science, Literature, and Art*.

Tufa. *s.* [Italian; from Lat. *tophus* = gravel.] See extract.

Tufa [is] a name applied in Italy to certain porous loose rocks, sometimes consisting chiefly of calcareous matter deposited from water containing much carbonate of lime in solution, and sometimes of fine powdery volcanic dust cemented more or less completely by the infiltration of water, but generally loose and spongy. This dust consists of material erupted from volcanoes, and under the microscope has sometimes been found to contain large quantities of the silicious cases of infusoria. The first-named variety is called *calcareous tufa*, the last-named *Volcanic tufa* or *tufo*. Volcanic *tufa* is the material under which Pompeii was buried. Similar materials have been deposited in places where there are no other indications of volcanic action, and occur among rocks of all ages. *Calcareous tufa* when consolidated passes into travertine. —Anstet, in *Brande and Cox, Dictionary of Science, Literature, and Art*.

The properties of a good tulip are, 1. It should have a tall stem. 2. The flower should consist of six leaves, three within, and three without, the former being larger than the latter. 3. Their bottom should be proportioned to their top; their upper part should be rounded off, and not terminate in a point. 4. The leaves when opened should neither turn inward nor bend outward, but rather

stand erect; the flower should be of a middling size, neither over large nor too small. 5. The stripes should be small and regular, and quite from the bottom of the flower. The chiv should not be yellow, but of a brown colour. They are generally divided into three classes, viz. precocious, or early flowers; medium, or middling flowers; and gerotim, or late flowers. The early blowing tulips are not near so fair, nor rise half so high as the late ones, but are chiefly valued for appearing so early in the spring.—*Miller, Gardener's Dictionary.*

Tumbrel, *s.* [Old Fr. *tombereau*, *tumerel*, *tumereau*; Modern Fr. *tombereau*; from

L. Lat. *tombarellus*, *tumbarellus*, *tumbarellum*, *tumbrellum*. This is derived from *tombere* = fall; the original *tumbrel* being a truck of the same kind with the one now in use, wherein the wheels, one on each side, are so placed that when the body of the vehicle (often consisting of a mere flat table without sides) is unloaded, it turns over, shooting out at once what it carries; the materials that can thus be disposed being of little value, often rubbish. In the previous editions it is explained, 'dung-cart.' The *tombereau* of the French is most frequently noticed as the vehicle from which the corpses of the victims of the Revolution were shot out. The vehicle in which loads were carted, and from which they could be unceremoniously shot out from was a *tumbrel*. So also were some of the kind of ducking-stools. 'Tumbrellum, Gallice, *Tombereau*, instrumentum fuisse voluit inventum ad castigandum mulieres rixosas, quo in aquam dejiceretur, immergeretur, et inde malicie et potæ extrahuntur. Covelius ait esse plaustrum in quo fornicationis aut adulterii rei, continencie causa, per civitatem aut burgum circumferuntur.' (Duange, *Tumbrellum*.) Of its use as an engine of punishment all the instances in Duange are from either England or Scotland; the *pæna tymboralis*, or *tumbrelli* being associated with that of the pillory.] In Johnson's Farmer's Encyclopædia a distinction is drawn between *Tumbrel*, a dung-cart, &c., and *Tumbrel*, which are given under separate entries. The latter is a term said to be chiefly current in Lincolnshire, where it is used for the purpose of giving hay to the sheep during winter. It is a circular cage or crib made of osiers or any wood pliant enough for the purpose. It is about ten feet in circumference and closely wattled to the height of a foot, where a break of about eighteen inches in height leaves an opening through which sheep can feed; above this it is again wattled. The staves that support the wattling are about ten inches asunder. About twelve sheep may feed from each *tumbrel*. Here the connection with *tombere* = fall, is either wanting or concealed.

Twiflow once ended, set *tumbrel* and man,
And compass that fallow as soon as ye can,
Tusser, Five Hundred Points of good Husbandry.

In the ocean and on the western shores of the European Continent the appearance of the *tunny* is . . . rare, almost accidental. — *Turrell, History of British Fishes.*

The male is called a ram, or *tap*. While with his mother, he is denominated a *tap*, or ram lamb, a heeler, and in some parts of the west of England a par lamb. From the time of weaning until he is shorn, he has a variety of names; being called a hog, a hogget, a hogger, a lamb hog, a *tap* hog, or a teg; and, if castrated, a wether hog. After shearing, when probably he is a year and a half old, he is called a shearer, a shearlamb, a shear hog, a dimond or dimond ram, or *tap*, and a shearing wether when castrated. After the second shearing, he is a two-shear ram, or *tap*, or wether; at the expiration of another year he is a three-shear ram, &c., the name always taking its date from the time of shearing. In many parts of the north of Scotland and Scotland he is a *tap* lamb, after he is shorn and until he is shorn; and then a *tap* hog; and after that a *tap*, or, if castrated, a dimond or a wether. The female is a ewe, or gimmer lamb, until weaned, and then a gimmer hog, or ewe hog, or teg, or shearer ewe. After being shorn, she is a shearing ewe or gimmer, sometimes a three or double-toothed ewe or teg; and afterwards a two-shear or three-shear, or a four or six-tooth ewe or shearer. And the great *turf* lie lightly on thy breast.
Pope, Epitaph to the Memory of an Unfortunate Lady.

Turf consists of vegetable matter, chiefly of the
moss family, in a state of partial decomposition by
the action of water. Cut, during summer, into
brick-shaped pieces, and dried, it is extensively used
as fuel by the peasantry in every region where it
abounds. The dense black *turf*, which forms the
lower stratum of a peat-moss, is much contaminated
with iron, sulphur, sand, &c., while the lighter *turf*
of the upper strata, though nearly pure vegetable
matter, is too bulky for transportation, and too
porous for factory fuel. These defects have been
happily removed by Mr. Williams, managing director
of the Dublin Steam Navigation Company, who
has recently obtained a patent for a method of con-
verting the lightest and purest beds of peat-moss,
or bog, into the four following products: 1. A brown
combustible solid, denser than oak; 2. A charcoal,
twice as compact as that of hard wood; 3. A

of which possesses very valuable properties.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

Turmeric [is] the root of the *Curcuma longa* and
rotunda, a plant which grows in the East Indies,
where it is much employed in dyeing yellow, as also
as a condiment in curry sauce or powder. The root
is knotty, tubercular, oblong, and wrinkled; pale-
yellow without, and brown-yellow within; of a
peculiar smell, a taste bitterish and somewhat spicy.
It contains a peculiar yellow principle, called cur-
cumin, a brown colouring matter, a volatile oil,
starch, &c. The yellow tint of *turmeric* is changed
to brown-red by alkalis, alkaline earths, amucato
of lead, and several metallic oxides; for which
reason, paper stained with it is employed as a che-
mical test. *Turmeric* is employed by the wool-
driers for compound colours which require an
admixture of yellow, as for cheap browns and olives.
As a yellow dye, it is employed only upon silk. It
is a very fugitive colour. A yellow lake may be

(which is) the *le*, the *lf*, and the *ft* of the
different forms of the verb *leave*. *Eleven* is
a similar compound with *one*. The sense
of this second element is *over*, from the
notion of *remainder*, *something to spare*.

two numerals immediately following *ten*;
but it has of late been impugned, and the
doctrine that the *l* in *ten*, and the *k* in *eleven*,
decem, *zehn*, &c., have respectively been
changed into *l* and *f* (or *v*) has been sub-
stituted. The Lithuanian *lik*, which is as-
sumed to be *dik*, is quoted in favour of the
view. So is the fact that by making *eleven*
and *twelve* = 1 + 10 and 2 + 10 respectively,
we get the same elements as those of the

The canal into which the external ear reflects the sonorous vibrations, passes inwards until it is closed by the Membrana Tympani, or drum of the ear, which forms the external wall of the *tympanum*. Within this cavity, which communicates with the throat by the Eustachian tube, there is a small series of bones, which serve to establish a connection between the Membrana Tympani, and that which covers in the Foramen Ovalis. The first handle of the malleus is attached to the Membrana Tympani, and near its base it gives attachment to the Tensor Tympani muscle. . . . The purpose of the *tympanic* apparatus is evidently to receive the sonorous vibrations from the air, and to transmit them to the membranous wall of the labyrinth. --*Dr. Carpenter, Principles of Comparative Physiology*, § 712.

The two passages. . . at their lower end. . . terminate differently, one opening freely into the vestibule, and another communicating with the cavity of the *tympanum* by an aperture which is termed the Foramen Rotundum, which is closed by a membrane. --*Dr. Carpenter, Principles of Comparative Physiology*, §§ 713-715: 1851.

2. Printing letter.
This is the style and language of the first printers, as every body knows, who has been at all conversant with old books. . . . First and Schœffer, the inventors, set the example in their first works from Mainz; by advertising the publick at the end of each, that they were not drawn or written by a pen, (as all books had been before,) but made by a

new art and invention of printing or stamping them by characters or *types* of metal set in forms. --*Midleton, On the Origin of Printing*, p. 16: 1733.

In Bacon's time, in 1633, there were only ten *types* with specific names, while we have now twenty-one. . . . The materials from which *types* and stereotype plates are cast are technically termed metal, and consist of certain proportions of lead, tin, and antimony, melted together. Until recently *types* were always cast in little moulds held in the hand, the melted metal being poured in from a small ladle; but now they are thrown off with great rapidity by machinery. . . . The beauty of *type* depends upon the delicacy with which the matrix, or mother *type*, is formed. . . . A complete assortment of *types* is called a *font*, which may be regulated to any extent. Every *typefounder* has a scale showing the proportional quantity of each letter required for a *font*; and a peculiar scale is required for each language. --*R. J. Courtney, in Brande and Cox, Dictionary of Science, Literature, and Art*.

3. Standard example.

Natural groups [are] given by *type*, not by definition. . . . Though in a natural group of objects a definition can no longer be of any use as a regulative principle, classes are not, therefore, left quite loose, without any certain standard or guide. The class is steadily fixed, though not precisely limited; it is given, though not circumscribed; it is determined, not by a boundary line without, but by a central point within; and by what it strictly excludes, but by what is eminently included; by an example, not by a precept; in short, instead of definition we have a *type* for our director. A *type* is an example of any class, for instance, a species of a genus, which is considered as eminently possessing the characters of the class. All the species which have a greater affinity with this *type-species* than with any others, form the genus, and are ranged about it, deviating from it in various directions and different degrees. Thus a genus may consist of several species, which approach very near the *type*, and of which the claim to a place with it is obvious; while there may be other species which straggle further from this central knot, and which yet are clearly more connected with it than with any other. And even if there should be some species of which the place is dubious, and which appear to be equally bound by two generic *types*, it is easily seen that this would not destroy the reality of the generic groups, any more than the scattered trees of the intervening plain prevent our speaking intelligibly of the distinct forests of two separate hills. The *type-species* of every genus, the *type-genus* of every family, is, then, one which possesses all the characters and properties of the genus in a marked and prominent manner. The *type* of the rose family has alternate stipulate leaves, wants the albumen, has the ovules not erect, has the stamens simple, and besides these features, which distinguish it from the exceptions or varieties of its class, it has the features which make it prominent in its class. It is one of those which possess clearly several leading attributes; and thus, though we cannot say of any one genus that it must be the *type* of the family, or of any one species that it must be the *type* of the genus, we are still not wholly to seek: the *type* must be connected by many affinities with most of the others of its group; it must be near the centre of the group, and not one of the stragglers. --*Whewell, History of Scientific Ideas*, vol. II, p. 121: 1838.

A genus may consist of several species which approach very near the *type*, and of which the claim to a place with it is obvious; while there may be other species which straggle further from this central knot, and which yet are clearly more connected with it than with any other. And even if there should be some species of which the place is dubious, and which appear to be equally bound to two generic *types*, it is easily seen that this would not destroy the reality of the generic groups, any more than the scattered trees of the intervening plain prevent our speaking intelligibly of the distinct forests of two separate hills. --*J. S. Mill, System of Logic*.

4. Emblem; mark of something.

Clean renouncing
The filth they have in tennis, and tall stockings,
Short bolster'd breeches, and those *types* of travel,

Type-metal. s. See extract.

Type-metal [is] the alloy of lead and antimony used in casting printer's types, the usual proportions being one part of antimony to three of lead, but a superior and harder kind of type is sometimes made by alloying two parts of lead with one of antimony and one of tin. Both these alloys take a sharp impression from the mould or matrix, owing to their expansion on solidification, and they are hard enough to stand the work of the press, without being brittle or liable to fracture. --*R. J. Courtney, in Brande and Cox, Dictionary of Science, Literature, and Art*.

Type-setter. s. One who sets type.

(For example see under *Type-setting*.)

Type-setting. s. Process by which type is set.

It is to M. Bonelli that we are indebted for the bold idea of uniting the science of electricity with the art of Gutenberg, and of practically demonstrating that an ordinary typographic composition, fit for local use, may be numerically reproduced at almost any distance. From this idea naturally arose the conception of converting the telegraph stations upon the main lines into so many *type-setting* workshops, of suppressing altogether every kind of delicate mechanism, of putting aside conventional alphabets, those pernicious sources of error. In a word, of reducing telegraphic science to a simple craft, within the reach of the most ordinary intelligence. . . . Ten *type-setters* under Bonelli's system can compose at least 300 despatches per hour, and these may be transmitted in less than that time. --*R. J. Courtney, in Brande and Cox, Dictionary of Science, Literature, and Art*.

Typhoid. s. [Gr. *typhos* (as the second element in a compound) - like.] In Medicine. A term of recent origin for that form of typhus which is attended with ulceration of certain parts of the intestinal canal. The defence of it, as found in the extract, implies that it has been objected to. It is certainly something more than a mere imitation of typhus, being a disease of equal gravity; just as *small-pox* is the graver of the two complaints which bear the same general name.

In *typhus*, diarrhoea seldom occurs, and hemorrhages from the bowels never. In *typhoid*, diarrhoea is very common, and there is hemorrhage from the bowels in about one case out of every three. In an excellent monograph on these fevers by Dr. Jenner, published in 1850, this gentleman shows that in all the fatal cases of typhoid fever which he examined, the abdominal glands, or Peyer's patches situated in the ileum, were found ulcerated. In a few instances, also, the solitary two-oval glands were ulcerated, and one eighth of the cases recorded died from extension of the ulceration with perforation of the intestine. As regards the causes of *typhus*, ulceration did not exist in a single instance. *Typhus* is a very rare disease among the better classes (making the exception of the visiting clergy, medical men, and students), whereas typhoid fever is probably more common among the rich than the poor. Again, *typhus* may occur at any age, while typhoid fever rarely attacks persons under forty, and is most common in youth; the former is slightly less dangerous than the latter, and lastly relapses do not occur in *typhus*, while they occasionally happen in *typhoid*. --*Lunner, Practice of Medicine*, vol. I, p. 236: 1862.

Typhoon. s. [Arabic.] Tornado; hurricane.

My couriers are fed with the lightning,
They drink of the whirlwind's stream;
And when the red morning is brightening,
They battle in the fresh ambience
I desire, and their speed makes night kindle;
I fear, they outstrip the *typhoons*;
Ere the cloud placed on Atlas can dwindle,
We'll encircle the earth and the moon.
Shelley, *Prometheus Unbound*.

Typhus. s. [Gr. *τυφος*=smoke, smoulder.] Low fever; nervous fever: (often used adjectivally).

The fatal cases in *typhus* and typhoid are one in between five and six. --*Lunner, Practice of Medicine*, vol. I, p. 236: 1862.
(See also under Typhoid.)

Once that many couriers ran,
Hand-in-hand, a proudly train,

What fuller bliss Maria shall bestow. Prior.

When D'Alembert (I believe) remarked that in certain governments only two animals find their way to the highest places, the eagle and the serpent, the metaphor not only conveys with great vividness the assertion intended, but contributes towards substantiating it, by suggesting, in a lively manner, the means by which the two opposite characters thus typified effect their rise. — *J. S. Mill, System of Logic*.

The second deciduous molar is the sectorial tooth; its blade is trilobate, but both the anterior and posterior smaller lobes are undelated, and the internal tubercle, which is relatively larger than in the permanent sectorial, is continued from the base of the middle lobe, as in the deciduous sectorial of the dog and hyena; it thus typifies the form of the upper sectorial, which is retained in the permanent dentition of several Viverrine and Musteline species. — *Owen, Anatomy of Vertebrates*, vol. iii, p. 35 k.

Tyrant. *s.* [The original meaning of the word was by no means so suggestive of violence, arrogance, and cruelty as the present. Its etymology is uncertain, and, though several derivations have been proposed for it from the Greek language, it is possible that the word is other than Hellenic. It arose in the Republics, and signified in its most favourable interpretation a person whose political power, whether well or ill exercised, was autocratic rather than what would now be called constitutional. It soon, however, came to suggest more of evil than of good. *Despot*, a word akin to *tyrant*, in respect to its meaning in English, is the Greek *δеспότης*, the Slavonic *Gospodar* and *Hospodar*, simply titles for certain rulers.]

Mr. Thierry thinks so, that is, from, or pay, and *odal*, property, to be the true root (offend). Guizot inclines to the same derivation; and it is, in fact, given by the Causse and others. The derivation of *odal* from *all* and *od* seems to be analogous; and the word *Udaller* for the freeholder of the Shetland and Orkney Isles, strongly confirms this derivation, being only the two radical elements reversed, as I remember to have seen observed in Gilbert Stuart's *View of Society*.—*Holman, Years of the State of Europe during the Middle Ages*, b. 2. ch. II. note. 1276

Ultra. *s.* Politician who advocates extreme measures.

With all his bright genius and solid learning, his venerable name would have been found at the head, or rather in its advance, of the most universally and most justly censured faction in the world. The 'Ultra' would have owned him for their leader, and would have admitted that he went beyond them in uncompromising consistency.—*Brigham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Burke.

Ultramarine. s. Pigment so called.

Others, notwithstanding they are brown, cease not to be soft and faint, as the blue of ultramarine.—*Dryden*.

Till a few years ago, every attempt failed to make ultramarine artificially. At length, in 1828, M. Guimet resolved the problem, guided by the analysis of MM. Clement and Desormes, and by an observation of M. Tassart, that a blue substance like ultramarine was occasionally produced on the sandstone hearths of reverberatory soda furnaces. Of M. Guimet's finest pigment I received a bottle several years ago, from my friend M. Merimée, secretary of the Académie des Beaux Arts, which has been found by artists little, if any, inferior to the lazulite ultramarine.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

It applies to certain cold winds from the North.

In every person a Papist who is willing to concede to the Bishop of Rome a primacy among Christian prelates? If so, James the First, Charles the First, Land, Heylin, were Papists. Or is the application to be confined to persons who hold the ultramontane doctrines touching the authority of the Holy See? If so, neither Bossuet nor Pascal was a Papist.—*Marsden, History of England*, ch. xiv.

The Church of Rome makes boldly the claim of authority for its own decisions. But there is no large, and that not the least enlightened and intelligent, portion of the Christian world which promiscuously denies this claim. Moreover, even among its members, there is great difference of opinion as to the organs of that authority. The ultramontane doctrines differ on this head from those of some of the national churches.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iv.

Unstroke. *s.* [either a Germanism from *unstreich*, or, as indicated in the extract, a compound of which the first element is the A.S. *ym*, *ymb*, or *um* = around, round about.] Edge of a circle. *Rare*, and as a compound, *fragmentary*. (In the Northumbrian Psalter, a work in old English, published by the Surtees Society, the compounds, as in German, are numerous.)

Such towns as stand (as one may say on tip-toes), on the very *unstroke*, or on any part of the utmost line of a *unstroke* (in a manner to stay out or round in), are not to be presumed joined according to exactness, but only to signify them there or thereabouts.—*Fuller, A Pious Sight of Palestine*, pt. i. b. i. ch. xiv.

Sometimes the word thus omitted is very curious. This is one of our dictionaries, and I may say the same of our glossaries, contains the word *unstroke*, which is yet most unworthy, being as it is the sole survivor of its kind. For while there is abundant evidence that our early English derived largely from the Anglo-Saxon, the use of the preposition *un* or *umbe* (as in composition *unpung*, *unbent*, *ungripe*, *unklip*, *unloft*, and many more, for which see Halliwell), no single word with this prefix, excepting only this one, has lived on into our later English, which yet the authors of our dictionaries, as I have said, have not observed, or observing have not cared to register. I incline to think they did not observe it, for while most of Fuller's other works have been diligently used by our lexicographers, his "Pious Sight of Palestine," one of his most curious and most characteristic, and in which *unstroke* twice occurs, has been, as far as my experience reaches, entirely overlooked by them.—*Archbishop Tenison, On Some Deficiencies in our English Dictionaries*.

Un. A Saxon privative or negative particle answering to the *in* of the Latins, the *a* of the Greeks, and *on* of the Dutch. It is placed almost at will before adjectives and adverbs. All the instances of this kind of composition cannot therefore be inserted; but I have collected a number sufficient, perhaps more than sufficient, to explain it. The examples, however, though numerous, might have easily been made more; for al-

most every adjective has a substantive and an adverb adhering to it, as *unfaithful*, *unfaithfulness*, *unfaithfully*. *Un* is prefixed to adjectives with their derivatives, as *unapt*, *unaptness*, *unaptly*; and to passive participles, as *hurt*, *unhurt*; *favoured*, *unfavoured*; it is prefixed likewise to participial adjectives, as *pleasing*, *unpleasing*, but rarely in the verbal sense expressing action; we cannot say the dart flew *unwounding*, though we say the man escaped *unwounded*. *In* and *un* may be thus distinguished. To words merely English we prefix *un*, as *unfit*; to words borrowed in the positive sense, but made negative by ourselves, we prefix *un*, as *generous*, *ungenerous*. When we borrow both words, we retain the Latin or French *in*, as *elegant*, *inelegant*; *politic*, *impolitic*. Before substantives, if they have the English termination *-ness*, as *fitness*, *graciousness*, it is proper to prefix *un*; if they have the Latin or French terminations in *-tude*, *-ice*, or *-ence*, and for the most part if they end in *-ty*, the negative *in* is put before them, as *unapt*, *unaptness*, *inaptitude*; *unjust*, *injustice*; *imprudence*; *unfaithful*, *unfaithfulness*, *infidelity*. (Johnson.) For further remarks see under *Unmake*.

The difference, upon which most of the German metaphysicians since the time of Kant have strongly insisted, between the *understanding* and the *reason* is illustrated by the following extract.

We state what to ourselves has long appeared the grand characteristic of Kant's philosophy, when we

mention his distinction, seldom perhaps expressed so broadly, but uniformly implied, between *understanding* and *reason* (*Verstand* and *Vernunft*). To most of our readers this may seem a distinction without a difference; nevertheless to the Kantists it is by no means such. They believe that both *understanding* and *reason* are organs, or rather, we should say, modes of operation by which the mind discovers truth; but they think their manner of proceeding is essentially different; that their provinces are separable and distinguishable, nay that it is of the last importance to separate and distinguish them. Reason, the Kantists say, is of a higher nature than *understanding*; it works by more subtle methods on higher objects, and requires a far finer culture for its development, indeed in many men it is never developed at all; but its results are no less certain, nay rather they are much more so; for reason discerns truth itself, the absolutely and primitively true; while *understanding* discerns only relations, and cannot decide without it. The proper province of *understanding* is all, strictly speaking, real, practical, and material knowledge, mathematics, physics, political economy, the adaptation of means to ends in the whole business of life. In this province it is the strength and universal implement of the mind; an indispensable servant, without which, indeed, existence itself would be impossible. Let it not step beyond this province, however; not usurp the province of reason, which it is appointed to obey, and cannot rule over without ruin to the whole spiritual man. Should *understanding* attempt to prove the existence of God it ends, if thorough-going and consistent with itself, in Atheism, or a faint possible Theism, which scarcely differs from this; should it speculate of virtue, it ends in utility, making prudence and a selfishly cunning love of self the highest good. Consult *understanding* about the beauty of poetry and it asks, Where is this beauty? or discovers it at length in rhythms, and fitnesses, and made and female rhymes. Witness also its everlasting paradoxes on necessity and the freedom of the will; its ominous silence on the end and meaning of man; and the cynicism which, under such inspection, the whole purport of existence becomes. —*Carlyle, Critical and Miscellaneous Essays, State of German Literature*.

I have the honour, not only to wear, but to have in-

Uniformitarian. adj.

Term applied to the

doctrine (in Geology) of Uniformity of
action, as opposed to Catastrophes.

(See under next entry; also under Catastro-

phism 3, and Catastrophist.)

Uniformitarian. s.

Advocate of the uni-

formitarian doctrine.
The course of things is uniform, to an intelligence
which can embrace the succession of several cycles,
but it is catastrophic to the contemplation of man,
whose survey can grasp a part only of one cycle.
And thus the hypothesis of uniformity, since it cannot
exclude degrees of change, nor limit the gauge
of those degrees, nor define the interval of their re-
currence, cannot possess any essential simplicity
which, previous to inquiry, gives it a claim upon
our assent superior to that of the opposite cata-
strophic hypothesis. Uniformitarian arguments
are negative only. There is an opposite tendency
in the mode of maintaining the catastrophist and the
uniformitarian opinions, which depends upon their
fundamental principles, and shows itself in all the
controversies between them. The catastrophist is
affirmative, the Uniformitarian is negative in his
assertions: the former is constantly attempting to
construct a theory; the latter delights in demolish-
ing all theories.—*Whewell, History of Scientific*
Ideas, vol. ii. p. 229: ed. 1838.

The inferiority of evidence . . . which attaches to this class of laws, is trifling compared with that which is inherent in *uniformities* not known to be laws of causation at all. . . . These are empirical laws in a more emphatic sense; and when I employ that term (except where the context manifestly indicates the reverse) I shall generally mean to designate those *uniformities* only, whether of succession or of coexistence, which are not known to be laws of causation.—*J. S. Mill, System of Logic*, iii. xvi. § 7.

Uniformity. *adv.* In a uniform manner.

1. Without variation; in an even tenor.

The present word has been selected as

the text for the present editor's remarks

upon Un-; inasmuch as in the verb *un-*

make we get one of the best illustrations

of the double import of the prefix. *Un-*

made, the participle, may mean either

'never made at all,' or 'made and de-

stroyed, made and altered, made and

transformed into something else;' the

former meaning being purely negative,

the latter positive as well as negative, or,

in one word, destructive. Contrast with

this such a word as *unspied*. The result

of the purely negative *un-* is a compound

with a participial form, but with *no verb*

to correspond; i.e. a *part. pref.*, or a *partic-*

ipical form with a *prefix*: whereas,

when the *un-* is destructive or privative,

we have both the participle and the verb.

In *undone*, *unmade*, &c., and other com-

pounds, the import of the prefix is only

known from the context; e.g. contrast

'he has *undone* all my work,' with 'he has

left his own work *undone*.' See, also, Edi-

tor's Preface, p. cxii.

For *un-*, as compared with *in-* negative,

see under In.

A double phosphate of uranium and copper, called green uranite, and urano-mica, occurs in Cornwall. Urea. s. In Organic Chemistry. See extract.

Urea ... is the characteristic ingredient of the human urine, and that of the greater number of our inferior animals. It is a highly oxidized substance, represented by the formula C₂H₄N₂O. It may be obtained by carefully evaporating urine to the consistency of cream, filtering and adding an equal volume of pure nitric acid; a crystalline precipitate of nitrate of urea gradually forms, which, decomposed by carbonate of baryta, yields nitrate of baryta and urea, from which boiling alcohol dissolves out the urea. An oxide of urea may be similarly formed, and decomposed by carbonate of lime into urea and oxalate of lime. Urea crystallizes in prisms; of a cooling saline taste; it is soluble in water and alcohol; but insoluble in ether and in an excess of nitric acid. It is neither acid nor alkaline. Pure urea is permanent in the air; at 200° it fuses, at a higher temperature it yields ammonia, oxalate of ammonia, and cyanuric acid. When heated in close vessels between 425° and 460° it is converted into carbonate of ammonia and water. An aqueous solution of urea remains long without change; but the addition of putrefactive substances resolves it more rapidly into carbonate of ammonia. The proportion of urea contained in urine is very variable. It is increased by exercise, and diminished by rest. Urea has been detected in the blood, and, where the kidneys are extensively diseased, may so accumulate there as to produce a form of uræmic poisoning known under the name of Uremia.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Ureter. s. [Gr. *ouron*; Fr. *uretère*.] Membranous tube from the basin of the kidneys to the bladder, one on each side, the use of them being to carry the urine from the kidneys to the bladder.

'Tis service of danger.—Why, you were best not
one o' the varlets of the city, a varlet; I'll appoint
you one, if you please.—*B. Jonson, Every Man in*
his Humour.

We may enumerate four distinct causes, tending
to the promotion of rivalry. The first of these
was the regular scheme of education, according to
which the sons of gentlemen, from the age of seven
years, were brought up in the castle of superior
lords, where they at once learned the whole disci-
pline of their future profession, and imbibed its
emulous and enthusiastic spirit . . . an inevitable
advantage to the poorer nobility, who could hardly
otherwise have given their children the accomplish-
ments of their station. From seven to fourteen
these boys were called pages or varlets; at fourteen
they bore the name of esquire. They were instructed
in the management of arms, in the art of horseman-
ship, in exercises of strength and activity. They
became accustomed to obedience and courteous
manner, serving their lord or lady in offices which
had not yet become derogatory to honourable birth,
and striving to please visitors, and especially ladies,
at the hall or banquet. Thus placed in the centre
of all that could awaken their imagination, the
creed of chivalrous gallantry, superstitious, or ho-
nour, must have made indelible impressions. Point-
ing for the glory which neither their strength nor
the established rules permitted them to anticipate,
the young scions of chivalry attended their masters
to the tournament, and even to the battle, and riv-
elled with a sight the armour they were forbidden
to wear.—*Hallam, View of the State of Europe*
during the Middle Ages, pt. II, ch. ix.

Royal Saloon, we knocked at the door, and it was
opened unto us. We sat down at the only spare
table in the place, and looked round at the snug
and varmint citizens with whom the room was filled.
—*Lord Lytton, Pelham*, ch. II.

VARNISH. *s*. [Fr. *vernis*; Lat. *vernix*; Gr.

Varnish is a solution of resinous matter, which is
spread over the surface of any body, in order to give
it a shining, transparent, and hard coat, capable of

of air and moisture. Such a coat remains on the re-

Such a difference of degree may be traced between
the class of *vascular* plants and that of cellular,
which includes lichens, algae, and other substances
whose organization is simpler and more rudimen-
tary than that of the higher order of vegetables, and
which therefore approach nearer to mere inorganic
nature.—*J. S. Mill, System of Logic*, b. iv. ch. viii.
§ 5.

The tooth of the marmoset offers an unequal-
val example of a course of nutriment from the
denture to the cement, and reciprocally. All the

the world, to beasts, and men; and, like
tyrant, enforces whatever it proposes.—*Felltham*,
Remarks, l. 71.

With all their words one virtue fr
How am I *vassal'd* then?—*Make such thy slaves

1. Predial servant; serf.

The Irish inhabiting the lands fully conquered,
being in condition of slaves and *villains*, did render
a greater revenue, than if they had been made the
king's free subjects.—*Sir J. Davies, Discourses on the State of Ireland.*

A trusty villain, sir; that very oft,
When I am dull with care and melancholy,
Lightens my humour with his merry jests.

Shakespeare, Comedy of Errors, l. 2.

The characteristic distinction of a *villain* was his
obligation to remain upon his lord's estate. He was
not only clothed from the lands
which he dwelt, but his person was bound, and the
lord might reclaim him at any time, by suit in a
court of justice, if he ventured to stray. But equally
liable to this confinement there were two classes of
villains, whose condition was exceedingly different.
In England, at least from the reign of Henry II.,
one only, and that the inferior species, existed; in-
capable of property, and destitute of redress, except
against the most outrageous injuries.—*Hallam, View of the State of Europe during the Middle Ages, ch. ii. pt. ii.*

I have remarked of the Anglo-Saxon people, that
neither their situation nor that of their descendants
for the earlier reigns after the Conquest appears to
have been servitude. But from the time of
Henry II., as we learn from Glanville, the *villain* so
called was absolutely dependent upon his lord's will,
compelled to multiplied services, and destitute of
property, not only in the land he held for his main-
tenance, but in his own acquisitions. . . . Yet there
were circumstances which materially distinguish it
from slavery. The condition of *villanage*, at least in
later times, was perfectly relative; it formed no dis-
tinct order in the political economy. No man was
a *villain* in the eye of the law, unless his master
claimed him: to all others he was a freeman, and
might acquire, dispose of, or sue for property with-
out impediment. . . . This class was distinguished
into *villains* regarding, who had been attached from
time immemorial to a certain manor, and *villains* in
gross, where such territorial prescription had never
existed, or had been broken. In the condition of
these, whatever has been said by some writers, I can
find no manner of difference; the distinction was
merely technical, and affected only the mode of
pleading.—*Ibid.* ch. viii. pt. iii.

According to the ancient law books, such as Glan-
ville and Bracton, the *villains* of the early middle
ages was absolutely dependent on his lord. . . . It is
further stated that *villains* were regarded and in
gross. . . . This distinction has been disputed by Mr.
Hallam, who inclines to the view that the condition
of *villains* was exceedingly depressed. Historical
evidence, derived from contemporary documents,
presents us, however, with a very different picture.
The *villains*, in the thirteenth century at least, is in
possession of land, which he holds permanently at
labour or money rents, and which descends to his
representatives on payment of a slight fine. . . . If
the state of the *villains* described by Glanville had
ever any literal existence, a great change must have
been effected during the long and obscure reign of
Henry III. It is certain that the condition of *vil-
lains* became better and better during the fourteenth
and fifteenth centuries, and that they had become
copyholders long before the Reformation. The last
enfranchisement is found in the reign of Elizabeth,
when a fine was paid, not we may be sure for social
privileges, or legal equality, but for some larger
rights over land. The latest plea of *villanage* alleged

as a defence to an action, was made in the reign of
James I., but the court unanimously decided that
servitude was unknown to the English law, and that
the plea was bad.—*Brande and Cox, Dictionary of
Science, Literature, and Art.*

2. Wicked wretch.

We were prevented by a dozen armed knights,
or rather *villains*, who, using this time of their ex-
treme insolence, all together set upon them.—*Sir

age*, the offspring followed their father's condition.
—*Hallam, View of the State of Europe during the

2. Lands and tenements held by a villain.

The tenements in *villanage*, whether by law or

able rent.—*Hallam, View of the State of Europe
during the Middle Ages, pt. iii. ch. viii.*

Vivisection. *s.* [Lat. *vivus* = alive + *sectio* = cutting, from *seco* = I cut; pass. part. *sectus*.] See extract.

Vivisection (in a term used to denote physiological experiments upon living animals. This practice is more frequent in France than in England, and the only ground on which it can be defended is obviously that of the alleged needs of science. With the establishment or refutation of this plea, it must stand or fall. By those who altogether oppose it, the cruelty of such experiments is strongly insisted on.—*Brande and Cox, Dictionary of Science, Literature, and Art*.

Vixen. *s.* [German, *fuchsin*.]

1. Bitch fox.

See a pack of spaniels, called lovers, in a hot pursuit of a two-legged vixen, who only flies the whole loud pack, to be minded out by one.—*H. Gervile*.

2. Irritable, quarrelsome female.

O! when she's angry, she's keen and shrewd;
She was a vixen when she went to school;
And though she be but little, she is fierce.

Shakespeare, Midsummer-Night's Dream, III. 2.
The best friends of mankind, those who most heartily wish the peace and prosperity of the world, and most earnestly to the left of their power strive to promote them, have all the disturbances and disasters happening clustered upon them by those fiery vixens, who, in pursuance of their base designs, or gratification of their wild passions, really do themselves embroil things.—*Barrow, Sermons*, vol. i. serm. xvii.

Vixenly. *adj.* Having the qualities or manner of a vixen.

It was not a confirmation of him, it was only (which in such a vixenly judge was a great favour) a forbearance to quarrel with the bishop, as not duly ordained.—*Barrow, On the Pope's Supremacy*.

Viz. *adv.* To wit; that is: (Johnson calls it 'a barbarous form for an unnecessary word').

That which so oft by sundry writers,
Has been apply'd 't' almost all fighters,
More justly may be ascribed to this,
Than any other warrior, viz.
None ever acted both parts bolder,
Both of a chieftain and a soldier.

Butler, Hudibras, I. 2. 201.
Let this be done relatively, viz. one thing greater or stronger, resting the rest behind, and rendering it less sensible by its opposition.—*Dryden, Translation of Despreux's Art of Painting*.

Among other books, we should be furnished with vocabularies and dictionaries of several sorts.—*Watts.*

2. List of words; range of language.

Whatever may be the extent of the vocabulary of the English language, it is certain that the most copious writer has not employed more than a fraction of the entire number of words of which it consists. It has been stated that some inquiries set on foot by the telegraph companies have led to the conclusion that the number of words in ordinary use does not exceed 3000. A rough calculation, founded on Mrs. Clark's Concordance, gives about 21,000 as the number to be found in the Plays of Shakespeare, without counting inflectional forms as distinct words. Probably the vocabulary of an author of our great writers is nearly so extensive. Todd's Verbal Index would not give us more than about 7000 for Milton; so that, if we were to add even fifty per cent. to represent for Milton's inferior voluminousness, the Miltonic vocabulary would still be not more than half as copious as the Shakespearean.—*Craik, History of English Literature*, vol. I. p. 564, note.

Vocal. *adj.* [Fr.; Lat. *vocalis*.]

1. Having a voice.

Prior, *Epistle to Pierswood Shepherd*, Reg.

2. Uttered or modulated by the voice.

Of creatures wanting voice.

Will'd me to leave my base vocation.

Shakespeare, Henry VI. Part I. l. 2.

4. Call; business.

Fluency—the being able easily to express his thoughts in correct words—is as essential to a speaker as drawing to a painter. This we cannot doubt, any more than we can refuse our assent to the proposition, that though merely giving pleasure is no part of an orator's duty, yet he has no vocation to give his audience pain—which any one must feel who listens to a speaker delivering himself with difficulty and hesitation.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Fox.

Used ironically, in contempt.

But lest you should for honour take
The drunken quarrels of a rake,
Or when a whore in her vocation
Keeps punctual to an assignation.

Iron is *volatilized* by the voltae are in nitrogen or in an exhausted receiver, and when a scarcely perceptible film has lined the receiver, this is washed with an acid, which then gives, with ferrocyanide of potassium, the prussian blue precipitate: in this case we readily detect iron, a metal by ordinary means fusible only at a very high temperature.—*Grove, On the Correlation of Physical Forces*.

Volt. *s.* [Fr. *volte*.] See extract.

Volt signifies a round or a circular tread; a gait of two steeds made by a horse going sideways round a centre; so that these two steeds make parallel tracks, the one which is made by the fore feet larger, and the other by the hinder feet smaller; the shoulders bearing outwards, and the croupe approaching towards the centre.—*Barrier's Dictionary*.

Voltae. *s.* In *Physics*. Relating to, connected with, that modification and development of galvanism due to Volta.

A *voltae* battery, which consists usually of alternations of two metals, and a liquid capable of acting chemically upon one of them, has . . . the power of producing electrical action in a liquid connected with it by metals upon which this liquid is incapable of acting: in such case the constituents of the liquid will be eliminated at the surfaces of the immersed metals, and at a distance one from the other. For example, if the two platinum terminals of a *voltae* battery be immersed in water, oxygen will be evolved at one and hydrogen at the other terminal, exactly in the proportions in which they form water; while, in the most minute examination, no action is perceptible in the intervening stratum of liquid. It was known before Faraday's time that, while this chemical action was going on in the subjected liquid, a chemical action was going on in the cells of the *voltae* battery, but it was scarcely if at all known that the amount of chemical action in the one bore a constant relation to the amount of action in the other. Faraday proved that it bore a direct equivalent relation; that is, supposing the battery to be formed of zinc, platinum, and water, the amount of oxygen which united with the zinc in each cell of the battery was exactly equal to the amount evolved at the one platinum terminal, while the hydrogen evolved from each platinum plate of the battery was equal to the hydrogen evolved from the other platinum terminal. Supposing the battery to be charged with hydrochloric acid, instead of water, while the terminals are separated by water, then for every thirty-six parts by weight of chlorine which united with each plate of zinc, eight parts of oxygen would be evolved from one of the platinum terminals: that is, the weights would be precisely in the same relation which Dalton proved to exist in their chemical combining weights. This may be extended to all liquids capable of being decomposed by the electric current, thence called *Electrolytes*; and as no *voltae* effect is produced by liquids incapable of being thus decomposed, it follows that *voltae* action is chemical action taking place at a distance, or transferred through a chain of media, and that the chemical equivalent numbers are the exponents of the amount of *voltae* action for corresponding chemical substances.—*Grove, Correlation of the Physical Forces*.

Voltae Electricity (is a term) used to denote the phenomenon resulting from the evolution of a current of electricity by chemical action. About 1790 Galvani noticed that the limb of a frog was convulsed if it happened to be touched by the extremities of two dissimilar metals when in contact at the other end. Rich Galvani and Volta thought, and rightly, that the convulsion of the frog was due to electricity; but both were wrong in their theoretical explanation of the source of this electricity. It is not the frog alone, as Galvani thought, nor the contact of dissimilar metals alone, as Volta supposed, that gives rise to the electric current, the physiological effect of which was observed by Galvani. It has now been abundantly proved by Faraday, that the source of *voltae* electricity is a difference of chemical action, taking place between the intervening liquid and one or other of the metals.—*Grove, in Fleming and Cox, Dictionary of Science, Literature, and Art*.

Voltammeter. *s.* [Gr. *μτρον* = measure.] Instrument for measuring the strength of a voltaic current.

Voltatype. *s.* Electrotpe. See *extract*.

The chemical action of the voltaic battery is not only a valuable agent in research, but is now practically employed on a large scale in some manufactures. It is used chiefly for the purpose of depositing a metal by electrolysis on the conducting surface to be coated. When a solution of sulphate is submitted to electrolysis, metallic copper is precipitated on the negative electrode, sulphuric acid appearing at the positive, where it is again converted into an equivalent of the sulphate if that electrode be of copper. Impressions of coins can thus be taken, and the metallic imprint produced is termed an *electrotpe* or *Voltatype*.—*Hirst, in Brande and Cox, Dictionary of Science, Literature, and Art.*

Volubility. *s.* [Fr. *volubilité*; Lat. *volubilitas*, from *volubilis*; *volvo* = I roll.]

1. Act or power of rolling.

Then celestial spheres should forget their wonted motions, and by irregular volubility turn their spheres any way, as it might happen.—*Hooker, Ecclesiastical Polity.*

Was, Were, &c. In meaning, this word may be considered as the past tense of *be* or of *am*. Etymologically, it is a wholly different word; i.e. a regular formation from A.S. *wesan*, of which it is the ordinary preterit tense. The common habit of calling it an *Imperfect* is founded on a misconception of the character of its construction in such combinations as 'I *was* speaking when he interrupted me.' Here the time to which *was* refers is simply *Past*, i.e. *Past* as measured from the time at which the above-given sentence is uttered. The time to which *speaking* refers is simply *Present*, i.e. *Present* as measured by the time when the interruption took place. To talk about *was* (by itself) being *Imperfect* is to mistake a combination for a tense. In the English, as now spoken, it is found in only four forms: 1. I, he, she, or it, *was*; 2. Thou *wast*; 3. We, ye, they *were*; also, if I, if he, she, or it *were*; if they *were*; 4. If thou *were*.

This means that it is found only in the past tense of two moods, the indicative and conjunctive.

To those who put faith in the current account of the dealings between Hengist and Vortigern, and the feast at which the Saxons murdered the Britons, the *imperative* form *was* was then current, the origin of the name *wassail* being *was* = *be* + *hail* = whole or sound; i.e. a term equivalent to 'Good health!' It was with these words that the *wassail* bowl or cup was offered to Vortigern at the banquet in question. If so, it is one of the first words recorded as having been spoken by the ancestors of the present English on English soil.

 them (except the corrector in his own civi-

 printer; but from the corrector they expect nothing,
 because the master printer chiding him, the work-

Otherwise, or in its ordinary sense, signifying something done that is praiseworthy, it combines, as a prefix, with the *participles* and *verbal abstracts*, as *wellbred*, *well-meaning*, *wellwisher*. Even here it often gives two words. The test, which is only certain so far as it goes, is the extent to which the combination has a similar one compounded of *ill*, or some equivalent opposite prefix to contrast it with. Here the opposition fixes the accent on the first syllable.

The terms with which we are here most concerned are names of classes of natural objects; and when we say that the principle and the limit of such names are their use in expressing propositions concerning the classes, it is clear that much will depend on the kind of propositions which we mainly have to express: and that the same name may have different limits according to the purpose we have in view. For example, in the *whale* properly included in the general term Fish? When men are concerned in catching marine animals, the main features of the process are the same, however the animals may differ; hence *whales* are classed with fishes, and we speak of the *whale-fishery*. But if we look at the anatomy of organization, we find that, according to those, the *whale* is clearly not a fish, but a beast. (combining this term, for the sake of distinctness, with sucking beasts or mammals). Of these, each has undergone some change. *What*, which is the true neuter (compare *that* and *it*) is to a great extent superseded by *which*, a compound of *hwa* + *lic* (*what-like*), the elements whereof are more clearly seen in the Scotch *whilk*; *hwa* has its genitival character disguised by the transposition of its last two letters (*whose* for *whors*); *hweam* is treated as an accusative rather than a dative; *hwece* has become an adverb of place (compare the Latin *quo*); the form in *a, hweane, hweane*, &c., is an adverb of time (Latin *quum*); *hwi* is limited to the expression of 'for what reason'; *hwea* is lost altogether.

Windlass. s.

1. Handle by which a rope or lace is wrapped together round a cylinder.

The *windlass* . . . used in many vessels instead of a capstan, for raising the anchor or lifting other heavy weights, usually consists of a horizontal polygonal beam of timber, supported at a short distance above the deck by strong uprights called *windlass bits*, and in the latter forms of the machine it is rotated by means of short poles called *land spokes*, which are introduced into mortices in the body of the *windlass*, and by which it is turned round, winding up the chain-cable as it revolves.

To prevent the *windlass* from turning back when the strain of the chain ceases upon it, a strong ratchet wheel is fixed on its centre into the teeth of which a number of jacks, hinged on an upright timber called the *palloit*, fall as the wheel revolves. Modern *windlasses* are rotated either by wheel-work or by a ratchet or friction contrivance, moved by

The hurt expressed by *withdrawing* sometimes is caused by a bite of a horse, or by a saddle being unfit, especially when the bows are too wide; for when they are so, they bruise the flesh against the spines of the second and third vertebrae of the back, which forms that prominence that rises above their shoulders.—*Farrier's Dictionary*.

• *Woe* occurs in phrases of denunciation or imprec-

ation to be a substantive, and in exclamation an ad-

jective, as particularly in the preceding lines of

Wolfish. s. Dog of a very large breed kept to guard sheep.
The luckless prey how treacherous tumbler gains,
And countless *de-fidogs* shake the lion's mane.
Tickell.
Of this magnificent breed, it is probable that there now remain no pure, unmixed samples, even in the country where it was once so much prized. It was used in hunting the wolf, when that animal still infested the forests of Ireland, and was carefully preserved, even to a late period, by a few persons in that part of the United Kingdom, by whom it was prized rather on account of its fine stature and noble bearing, than as being of any considerable utility. The figures of this dog usually indicate a considerable approach to the greyhound in form; but in the given in the third volume of the *Linnæan Transactions*, by my respected friend, Mr. A. B. Lambert, the venerable President of the Linnæan Society, this resemblance is very slight. It appears that the breed was originally produced from the great Danish dog, crossed by the greyhound; at least its points in general warrant this supposition; and the ancient Scottish *wolf-dog* was doubtless derived from a similar origin. Almost the last person who kept this breed in Ireland was Lord Almon, who, in the year 1780, had eight of them from one of which Mr. Lambert's drawing was taken.—*Bell, A History of British Quadrupeds, including the Cetacea.*

5. It is generally used as an auxiliary verb
with an infinitive, to which it gives the
force of the subjunctive mood.

2. I was or am resolved; I wish or wished to; I am or was willing.

You would be satisfied to—

Would? nay, and will. *Shakespeare, Othello*, iii. 3. They know not what they are, nor what they would be, any further than that they would not be what they are.—*Sir R. L. Estlin*.

It will be needless to enumerate all the simple ideas belonging to each sense; nor indeed is it possible if we could; there being a great many more of them belonging to most of the senses than we have names for.—*Locke*.

What wouldst thou with me?

4. Should wish.

The excess of diet should be avoided. *Bacon*. As for perurbation, which belongeth to separation, trial should be made by clarifying by adhesion, with milk put into new beer, and stirred with it.—*Id.*, *Natural and Experimental History*.

6. It has the signification of I wish, or I pray. This, I believe, is improper; and formed by a gradual corruption of the phrase, would God; which originally imported, that God would, might God will, might God decree. From this phrase, ill understood, came would to God; thence, I would to God; and thence I would, or elliptically would, came to signify I wish; and so it is used even in good authors, but ought not to be imitated.

I would my father had but with my eyes! *Shakespeare, Midsummer-Night's Dream*, i. 1. Wise men will do it without a law; I would there might be a law to restrain fools.—*Bacon, Advice to Villiers*.

On Carthage's ruins your wandering king. *Dryden, Translation of the Æneid*, i. 606.

I would do it. My resolution is that it should be done by me.

Thou wouldst do it. Such must be the consequence to thee; that such should be thy act.

He would or it would. This must be the consequence to him or it; that such should be his act, or its effect.

This, like the notice under Should, stands in the words of Johnson.

As an auxiliary verb, will differs from shall in being a present tense; shall (see the word) being a perfect. It also differs in the extent to which its original meaning is modified. What this was in shall is by no means certain; different doctrines concerning it being current. The relation of will, the auxiliary, to will, denoting an act of volition, is beyond doubt. The bearing of this upon the construction of the two words, according to the person of the pronoun (I, thou, he, we, &c.), with which they combine, has been noticed under Shall.

Its use as a present tense of what may be called an Optative or Subjunctive Mood (in which should and were agree with it), is by no means evident.

It may be noticed, however—

a. First; that the wish which would denotes an unsatisfied one; one that implies want of power, opportunity, or the like.

When opportunity is wanting, is so often lost by allowing the time for it to pass by, that the use of a past tense serves to denote the wish, the wish in regret is more or less mingled.

b. Be this as it may, a comparison between certain constructions of the Greek optatives and conjunctives, with certain constructions of the imperfects and preterites of the subjunctive in Latin (*aiyopi* *aiyos*, and *dicerem*, *dicam*), show how easily, in certain cases, a tense may pass for a mood, and a mood for a tense.

Scratch thee but with a pin, and there remains Some scar of it. *Id.*, *As you like it*, iii.

He, stamping, opened my left side, and took From thence a rib: wide was the wound, But suddenly with flesh fill'd up and heal'd.

About the latter end of John's reign, some only of the most eminent tenants in chief were summoned by particular *writs*; the rest, by one general summons through the sheriffs of their several counties. This is declared in the Great Charter of that Prince, wherein he promises that, whenever an aid or service shall be required, the king shall summon archbishops, bishops, abbots, comites or barons, knights, and all the freeholders of the realm, and that this is likely to have proceeded from the pride with which the ancient and wealthy barons of the realm would regard those newly created by grants of elevated honors, or those decayed in estate, who yet were by their tenures on an equality with themselves. They procured, therefore two innovations in their summons; first, that these inferior barons should be summoned generally by the sheriff, instead of receiving their particular *writs*, which made an honorary distinction; and next, that they should pay relief, not as for an entire barony, one hundred marks; but as the rate of five pounds for each knight's fee which they held of the crown. This changed their status to one by mere knight-service, and their summons to tenants in chief.—*Hutton, View of the State of Europe during the Middle Ages, p. 113, ch. viii.*

The elections went on rapidly and smoothly. There were scarcely any contests. For the nation had, during more than a year, been kept in constant expectation of a parliament. *Writs*, indeed, had been issued and recalled. The first of these three words is introduced from the Spanish, the other two from the Greek; the few additions made of late being all from that language. hamu—skin, clothing, covering. See under
Hammercloth).

I have ventured to restore to this bird what I
believe to have been its first English name, *yellow-
hammer*, though it appears to have been printed
yellow-haw and *yellow-hammer*, from the days of
Dr. William Turner and Merrett to the present
time. The word *Ammer* is a well-known German
term for hunting in very common use; thus *Blei-
stein* employs the names *schnee-ammer*, *trauben-
ammer*, *rauh-ammer*, *garten-ammer*, and *gold-ammer*,
for our snow-bunting, corn-bunting, reed-bunting,
oriole or garden-bunting, and yellow-bunting. Our
mode of prefixing the letter *h* to the word appears
to be unnecessary, and even erroneous.—*Yarell,

he is just qualified to kill an hare.—*Addison.*
[*Yeoman* (s.) rightly explained by Spelman from Gothic
gari: Old High German, *gawi*, *gawwi*, German,
gaw, *gail*, *gaw*; Frisian, *gao*, *gaw*, district, country
place, village, whence Old High German, *gontih*,
gawir, rural, rustic. The primary meaning of the
word would thus be countryman. Frisian, *gawman*,
gawman, villager, village inhabitant; *gawkerche*,
village church; *gawedon*, *gawede*, parishioners, vil-
lage people. (Lechthofen.)—*Wedgwood, Dictionary
of English Etymology.*]

This is the word *gaw*, so common in
Germany and Switzerland (*Aargau*, &c.),
though comparatively rare in A.S.

2. It seems to have been anciently a kind of
ceremonious title given to soldiers; whence
we have still *yeomen* of the guard.

And were enraged ready still for fight.

brege, Anecdotes, li. 530.*

Yeomanry. s. Collective body of yeomen.

Yttrium. s. In Chemistry. Metal so called.

See extract.

Yttria is the metallic base of an earth discovered in 1794 by Professor Yttelin, in a mineral found at Ytterby, in Sweden, from which it received the name of *yttria*. The salts of *yttria* have in general a sweet taste, and the sulphate and several others have an anodyne colour; but the recent researches of Mosander have shown that this is owing to the presence of one or both of the new metals, cerium and terbium, which he finds to be commonly associated with *yttria*.—*Cyc. Dictionary of Arts, Manufactures, and Mines, p. 400.*

Yule. s. [A.S. *geol*; see extract from Wedg-

wood.] Word adopted, and formerly used for the times of Christmas and Lammas;

YWIS

{YOUTHFUL
HUMILITY}

still common as a provincial term, and in the Norse languages the ordinary name for Christmas.

This is the original *yule*... the other the *yule* of Aunser determinately.—*Hammond, Works, i. 690.*
Dr. Jameson agrees with Mr. Pinkerton in tracing it to one of the three great religious festivals in the year, which the ancient Goths celebrated; namely *Yule*, or *Jol*, celebrated at the time of the winter-solstice, in the month of the sun. Hammond refers it to the Latin *jejunium*. The Welsh *ywl*, or *ywyl*, may be added, is a *holyday*; and the *Cyfrarian* signifies a feast. *Feld.*

The old Norse *jol* signified not merely the Christmas festival, but a feast in common. It is doubtful, however, whether the name of the principal feast of the year has been ascertained, or whether the word once signifying feast in general has been in course of time restricted to the most-winter festival. Bede seems to regard the name of *jol* as equivalent to German *masenavide* (santified), the winter solstice, when the sun turns from the shortening to the lengthening of the day. In the Anglo-Saxon calendar the months of December and January, on either side of the solstice, were called *accespoda* and *afth escoda*, the former and the latter *erle*.—*Wedgwood, Dictionary of English Etymology.*

To the present Editor the connexion seems to be with A.S. *heol*; Norse, *hjul*—wheel, i.e. the turn of the year.

Used adjectively, and as the first element in a compound: (as, 'yule-boy'; 'yule-cake,' 'yule-sing, dancing yule-games.—*Barton, Antiquary of Manchester, p. 270.*

The mistletoe ceremony of the yule festival continued from the time of the Druids.—*Stukeley, Palaeography of Science, p. 10.*

Zebra. s. Animal akin to the horse and ass; Equus zebra.

Of the remaining herd animals, viz. the ass, the zebra, the quagga, &c., little need be said: the zebra has been domesticated from the earliest record. The zebra shuns the hands of men, and lives in the deserts. We are told that the quagga is gregarious, being in troops of more than one hundred, in the vast interior deserts of Southern Africa, where also the zebra congregates; but that the two herds never intermix. The mountain zebra is a third species, first described by Mr. Burchell. *See Nassau, Natural History and Classification of Quadrupeds, § 129.*

Zinc. *s.* [German, *zink*.] Metal so called.
Zinc is a metal of a bluish-white colour, of considerable lustre when broken across, but easily tarnished by the air. Its fracture is hackly, and foliated with small facets, irregularly set. It has little cohesion, and breaks in thin plates before the hammer, unless it has been previously subjected to a regulated process of lamination, at the temperature of from 220° to 300° Fahrenheit, whereby it becomes malleable, and retains its malleability and ductility afterwards.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

The golden sun...
Gallops the *zodiac* in his glittering coach.

Zoographical. *adj.* Connected with, relating to, Zoography.

Zoography. *s.* Description of the forms, natures, and properties of animals.

If we contemplate the end, its principal final cause being the glory of its Maker, this leads us into divinity; and for its subordinate, as it is designed for alimental sustenance to living creatures, and medicinal uses to man, we are thereby conducted into zoography.—*Glaucilla, Serapis Sancti*.

Zōoid. *s.* [Gr. *zōōn* = form, shape, resemblance; *-ōid* = like.] In *Biology*. See extract.

The present theory, with regard to the cause of these diseases (eruptive fevers), is, that it depends upon a morbid poison, a small quantity of which, entering the blood, produces in that fluid a peculiar change, which is analogous to that of fermentation. To distinguish the change in animal from what occurs in vegetable fluids, the term *zymosis* has been introduced by Mr. Farr (from *zymos*, to ferment).—*Dr. J. H. Bennett, Clinical Lectures on the Principles and Practice of Medicine*, p. 352: 1846.
